Management Solutions for Corporate Extranets

Your Extranet should be a seamless portal that allows users inside and outside your corporate network to collaborate and share information with streamlined simplicity. The Extranet User Manager is an easy-to-use website application that contains a robust set of administrative and end-user features to enable collaboration with your external users.

Benefits of EUM

- ▶ Collaborate with partners, customers, and vendors outside your organization
- ▶ Increase ROI with self-serve user password and delegated account manager features
- ▶ All users can login using their existing email addresses
- ▶ Authenticated users are seamlessly logged in without having to re-enter their credentials
- ▶ Apply your corporate branding standards to all extranet portals
- ▶ EUM easy trial - Start collaborating today with a free, no-commitment product evaluation

Benefits and Features of EUM

Single Sign On

Sign in once and stay signed in as you switch between programs

This is securely managed through SAML tokens

Hosted either on premises or in the cloud through SharePoint, Office 365, and Azure

Azure AD B2B

Invite external users from partner organizations and authorize them to access your resources

This includes Office 365, which allows you to securely share access to SharePoint Online

Take control of your user experience, delegation, and governance for your extranet

Multi-Factor Authentication

It requires more than one verification method when logging in

This adds a critical second layer of security to user accounts

The user either gets:

- A text message they need to reply to with a specific code

- Or a phone call

Delegation

Management of the extranet users is delegated to the business

IT doesn't need to manage accounts

Can also be delegated securely to the external organizations themselves

Branding

Consistent corporate colours and logos throughout your portals

Apply your corporate brand language to the Extranet User Manager

Easily configure rich text emails sent through the Extranet User Manager

Mobile Friendly

Leverages the Twitter Bootstrap framework

All end-user pages adapt to smartphone, tablet, or desktop experiences
